

**Newsletter n. 7 • February 2026**

---

## **Welcome to the #ComplianceServices project's seventh newsletter!**

The Compliance Services project brings the latest news and updates on changes in the EU energy labelling and ecodesign regulations – mainly in the areas of heating, smartphones & slate tablets, white goods (e.g. tumble dryers), air conditioning, PV products, etc.

**In this edition of the newsletter, we invite you to contribute to the European Commission call to simplify and improve energy labelling procedures. You can also learn more about our project's monitoring of energy labelling display in internet commerce and visit the European Commission's portal on energy-efficient products.**

---

**Energy labels are a key driver to bring more energy efficient products to the EU market. But - as a dealer or supplier - do you think that there is:**

👉 Further potential to make sure energy labels meet the key objective of

influencing consumers before their purchasing decision?

- 👉 Opportunity for simplification in distributing the energy labels or registering products?
- 👉 Potential for clarifying responsibilities of stakeholders and the legal texts?
- 👉 Potential for better use of EPREL and digital means to more easily compare products and get access to further, e.g. repair-related information?

Have your say! Use the "Call for evidence" opportunity and provide your input:

[Omnibus simplification of energy-efficient product legislation](#)

## Call for evidence

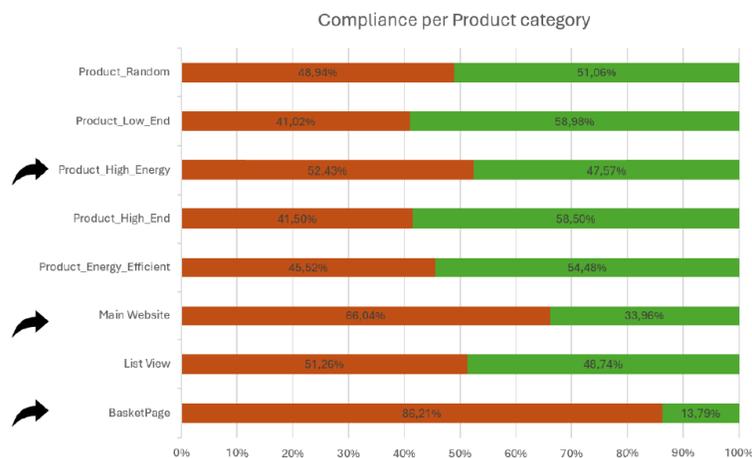

Omnibus simplification of energy-efficient product legislation

## Are energy labels properly displayed at the internet points of sale?

Results of the Compliance Services project's new monitoring activity in online stores in 7 EU countries indicate room for improvement within specific energy labelling display requirements and for specific product categories, such as heating products. Read more details in our [press release](#).

### Online sales – results of monitoring

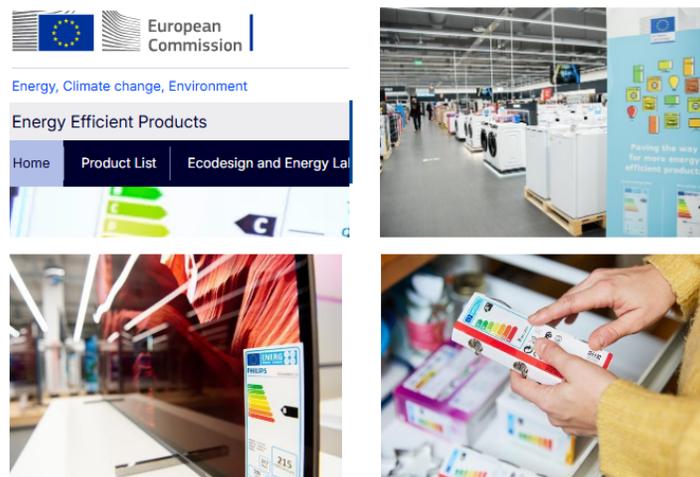

# Explore the EU Commission's Energy Efficiency Products Portal: Your one-stop shop for Sustainable products

The [Energy Efficiency Products Portal](#) offers comprehensive insights into any product that must be sold with an associated energy label or that is regulated at the EU level by ecodesign requirements, from domestic appliances to commercial or industrial products.

The ecodesign legislation is intended to ban from the EU single market the worst-performing products, whilst the energy labelling guides customers to the choice of the product with the lowest total cost of ownership for the intended use. Here you find also the European Product Registry for Energy Labelling ([EPREL](#)), with all models placed on the EU market, where you may search the best product or simply check the state of play. All this helps citizens and the business to reduce energy consumption, lower utility bills and extend the lifetime of products.

Stay informed with expert reviews, user-friendly guides, and updates on energy efficiency standards, ensuring you make informed decisions that contribute to a greener tomorrow.

Dive into the [portal](#) today and start your journey towards sustainable living. Together, let's make a positive impact on the environment and pave the way for a more energy-conscious future in the EU!

# Do you have a question? Let us know!

Please, follow us for more news to learn about the upcoming changes to the energy labelling and ecodesign policies! Do you have a question? Get in touch:
